CISC 1600   Joel Franco

Group 7   Christian Serrano

                                                                  10/11/2017

<u>Project 1 Design Document</u>

The goal of our website is to present information about group seven. We wrote some details about us, made a list of ten things we would like to do, and made a table of three careers we would like to pursue. The main goal is to show what we have learned in HTML and CSS.

In the CSS file, we applied an image to the background. The image is there to give the website a texture. The texture resembles a table-top material. We thought the texture would look more appealing than a solid color. The title of the index page is in solid black and centered, so that the page's purpose is clear. We placed the group number and semester under the title for clarity as well. On the top left of the index page, we tried to make the list of links look like a navigation bar. The link in the bar is highlighted when you place the cursor over it. The links simply go to our about pages and our lab pages. At the bottom, we placed a picture of the Brooklyn College Library. The picture is only there to prevent the index page from looking too boring. We also rounded the corners of the image to help its appeal.

The same background texture is present in the about me pages. It helps the pages feel consistent. The titles of the pages are also centered at the top with a larger font. The rest of the content fulfills the requirements of the assignments. We made some font changes in the CSS file. We also changed the border of the table to compliment the background texture. The were no major problems in the assignment. We had to figure out some of the CSS and HTML syntax. We also learned more about how the CSS and HTML files interact.
